

## SolarTech Power Solutions

**120a lithium battery with inverter can be used for several hours**

## Overview

---

An inverter battery lasts about 5 to 10 hours when fully charged. The backup time depends on the battery capacity and the load, which is the total energy consumption. What is a lithium battery for inverter?

Lithium offers unmatched performance, a longer lifespan, and better efficiency than traditional batteries. Whether you're setting up a home backup system, solar power solution, or mobile energy unit, this guide will walk you through everything you need to know about lithium batteries for inverters. Part 1.

How do I choose a lithium battery for inverter use?

When selecting a lithium battery for inverter use, it is essential to understand the key specifications: Voltage (V): Most inverter systems use 12V, 24V, or 48V batteries. Higher voltage systems are more efficient for larger power loads. Capacity (Ah or Wh): Amp-hours or Watt-hours indicate how much energy the battery can store and deliver.

How long does an inverter battery last?

An inverter battery lasts about 5 to 10 hours when fully charged. The backup time depends on the battery capacity and the load, which is the total energy consumption. You can use a formula or a battery backup calculator to determine the exact duration based on your specific voltage and usage. Next, identify the specifications of your battery.

How do I calculate a lithium inverter battery backup time?

To ensure your lithium inverter battery meets your needs, calculate the estimated backup duration using this formula: Battery Backup Time (hours) = Battery Capacity (Wh) ÷ Load (W) Example: A larger lithium-ion battery for inverter gives you longer power backup.

Can lithium batteries be used in inverter-powered systems?

Lithium batteries can be used in a wide range of inverter-powered systems:  
Home power backup: Provides energy during power outages and ensures critical appliances stay running. Solar energy storage: Ideal for storing daytime solar generation for nighttime use.

Can a 1000 watt inverter run a 100 Ah lithium battery?

In reality, factors such as inverter efficiency and battery discharge characteristics might affect the actual run time. When pairing a 100 Ah lithium battery with a 1000 watt inverter, it is crucial to ensure compatibility to achieve optimal performance.
