

SolarTech Power Solutions

17kw grid-connected inverter

Overview

What are grid-connected inverters?

Grid-connected inverters (GCI) are used to feed power from renewable energy distributed generators into the grid*. They are widely used for this purpose. Repetitive control (RC) enables such inverters to inject high quality fundamental-frequency sinusoidal currents into the grid.

What is a 10kW on-grid inverter?

A 10kW on-grid inverter is specially designed to add extra electricity to your system. It generates enough electricity to meet your daytime needs and saves excess electricity for later use at nighttime.

What is an on-grid 5kW inverter?

An on-grid 5kw inverter is easy to maintain and converts the direct current to alternating current for powering domestic appliances and even commercial equipment. These solar inverters typically offer high efficiency of around 93% to 96%. Also, the warranty period of these inverters is around 5-10 years.
