200wm chemical energy storage power station

Overview

What is Ningxia power's energy storage station?

The energy storage station is a supporting facility for Ningxia Power's 2MW integrated photovoltaic base, one of China's first large-scale wind-photovoltaic power base projects. It has a planned total capacity of 200MW/400MW, and the completed phase of the project has a capacity of 100MW/200MW.

Why should you choose a lithium phosphate energy storage station?

The energy storage station adopts safe, reliable lithium iron phosphate battery cells for energy storage with great consistency, high conversion rate and long cycle life, as well as a non-walk-in liquid-cooled containerized energy storage system.

How does the energy storage system work?

Each energy storage unit is connected to the 35kV distribution unit of the booster station through a 35kV collector line and then boosted to 220kV via a 120MVA (220/35kV) transformer. The project is equipped with an energy management system (EMS) to receive grid dispatching commands and manage the charge and discharge of the energy storage system.

Why should you choose Tai'erzhuang ESS power station?

With strong load-changes tracking, fast and precise PQ response, and a bidirectional regulation function, Tai'erzhuang ESS power station is a quality and flexible power source to participate in peak & frequency regulation and emergency backup, thus ensuring the safety and stable operation of the power grid.

How much power does Zaozhuang have?

Take Zaozhuang city as an example, the total installed capacity of wind and solar power generation has reached 2,536,600 kilowatts, accounting for 31.9% of the city's total capacity, which makes the peak and frequency regulation

more difficult. the regulation ability of the power grid.
