

SolarTech Power Solutions

5V 1 5W solar panel

Overview

What is a 5V solar panel?

WSL Solar's 5V solar panel is built with the latest most efficient crystalline silicon solar cells or super high efficiency Sunpower solar cells. These 5v solar panels are great for charging your 3.2V DC batteries and ideal for use in off grid applications such as GPS tracking, educational kits, small electronic devices, LED lighting etc.

What is a 5 watt solar panel?

This 5-watt solar panel has an MPPT chip (maximum power point technology), which makes it generate 20-30% more power compared to normal PWM (pulse width modulation). It prevents overcharge, over-discharge, and short circuits. Furthermore, the solar panel is waterproof, spark-proof, and has a fully protected battery.

Is a 1.5kw solar panel a good choice?

A 1.5kW solar panel is a good choice for small households and businesses with an average electricity budget of \$120-150 per bill cycle. It is viable instead of a 1kW panel as it ensures longer life and can easily cater to your electricity needs. A 1.5kW solar panel has a size that is suitable for these electricity requirements.

How many solar panels does a 1.5kw solar panel use?

A 1.5kW solar power system uses 5-6 solar panels to build up the system. Each panel is approximately 1.6m x 1m in size, requiring at least 10-12m² roof space for installation. Therefore, a 10m² roof space is essential for a 1.5kW solar panel system, compared to larger systems that occupy more space.
