Abkhazia solar panels

Overview

Is high energy consumption a problem in Abkhazia?

The issue of high energy consumption has recently come to the fore in Abkhazia, a lush strip of land once the playground of the Soviet elite, that broke away from Georgia in the early 1990s, after the collapse of the Soviet Union.

How much does electricity cost in Abkhazia?

The cost of one kilowatt-hour (kWh) in Abkhazia, which gets most of its power from a massive Soviet-era dam it shares with Tbilisi, is about \$0.005, more than 10 times cheaper than in Georgia and 20 times less than the U.S. average.

Is Abkhazia part of Georgia?

The rest of the world still considers it part of Georgia. This has left it largely isolated and underdeveloped, said Hess. "Abkhazia faces substantial issues at attracting any kind of foreign investment or growing its local economy," he told the Thomson Reuters Foundation.
