# **Are Asian-made solar panels any good**

## Overview

---

As a rule, Chinese solar panels are as good as any others on the market. China produces around 80% of all solar panels, so like any product, there are cheaper offerings from less well-known companies.

As a rule, Chinese solar panels are as good as any others on the market. China produces around 80% of all solar panels, so like any product, there are cheaper offerings from less well-known companies.

Many of the most successful solar panel manufacturers in the world come from China, including LONGi, Jinko, Trina, and Canadian Solar (despite the name). These brands produce a sizable portion of the solar panels used in the United States, and are used in everything from huge utility-scale solar.

In this deep dive, we compare efficiency, cost, sustainability, and innovation to reveal surprising truths about the global solar market and help you choose the best option for your needs. When it comes to renewable energy, few questions spark as much debate as: “USA vs China – which country makes.

China dominates the global solar panel production: 78% of the solar cells produced in 2019 were made in China. Production of solar modules and polysilicon is not far behind — with 72% and 66%, respectively. In comparison, the U.S. production of solar cells has decreased from 13% in 2004 to less.

However, American-made solar panels are very effective and last longer too. You should know the country that manufactures quality solar cells before embarking on solar installation. This article compares the American and China panels and their environmental impacts. US Solar Panels Vs. Chinese.

Here are some advantages and disadvantages of solar panels manufactured in China, based on the search results: Chinese-made solar panels are often more affordable compared to other brands. Chinese companies have made significant investments in solar manufacturing and are making remarkable progress.

Am in Asia (Philippines) and I want to build a small system basically just need

micro inverters to supplement usage and no batteries. The problem is everything here is junk. 4 inverters (different manufacturers) failed in less than 1 year. Can anyone actually recommend any legit quality.
