

**SolarTech Power Solutions**

# **Austria energy storage power supply customization**

## Overview

---

Does Austria have a market for energy storage technologies?

A study 1 carried out by the University of Applied Sciences Technikum Wien, AEE INTEC, BEST and ENFOS presents the market development of energy storage technologies in Austria for the first time.

Does Austria have a reliable electricity supply network?

Austria has a highly reliable electricity supply network – thanks mainly to a diversified mix of energy sources which ensures that generating capacity can be put to optimum use at any time. This section of our website tells you everything you need to know about the Austrian electricity system.

Why do we need a high-efficiency storage facility in Austria?

Above all, we need to build high-efficiency storage facilities and expand our networks. Hydropower plants account for more than 60% of the electricity produced in Austria. Taking wind, biomass and solar into account, renewable power generation rises to more than three-quarters of the country's total electricity production.

How much does a photovoltaic battery storage system cost in Austria?

The total inventory of photovoltaic battery storage systems in Austria therefore rose to 11,908 storage systems with a cumulative usable storage capacity of approx. 121 MWh. For 2020, a price of around € 914 per kWh of usable storage capacity excl. VAT was charged for PV storage systems installed as turnkey solutions.

How big is Austria's hydraulic storage power plant capacity?

In 2020, Austria had a historically grown inventory of hydraulic storage power plants with a gross maximum capacity of 8.8 GW and gross electricity generation of 14.7 TWh. This storage capacity has already played a central role in the past in optimising power plant deployment and grid regulation.

Does Austria have a high-voltage transmission system?

More than 30 countries form the integrated system, and Austria is one of them. High-voltage lines transmit electricity over large distances, and national transmission system operators (TSOs) work around the clock to ensure that the system remains in equilibrium. Plans are in place to make the European electricity network smarter in the future.
