Battery optimization for communication base stations

Overview

Why do communication base stations use battery energy storage?

Meanwhile, communication base stations often configure battery energy storage as a backup power source to maintain the normal operation of communication equipment [3, 4]. Given the rapid proliferation of 5G base stations in recent years, the significance of communication energy storage has grown exponentially [5, 6].

Why do telecom base stations need a battery management system?

As the backbone of modern communications, telecom base stations demand a highly reliable and efficient power backup system. The application of Battery Management Systems in telecom backup batteries is a game-changing innovation that enhances safety, extends battery lifespan, improves operational efficiency, and ensures regulatory compliance.

Why do telecom base stations need backup batteries?

Backup batteries ensure that telecom base stations remain operational even during extended power outages. With increasing demand for reliable data connectivity and the critical nature of emergency communications, maintaining battery health is essential.

What are the basic parameters of a base station?

The fundamental parameters of the base stations are listed in Table 1. The energy storage battery for each base station has a rated capacity of 18 kWh, a maximum charge/discharge power of 3 kW, a SOC range from 10% to 90%, and an efficiency of 0.85.

How does a telecom base station work?

Telecom base stations—integral nodes in wireless networks—rely heavily on uninterrupted power to maintain connectivity. To ensure continuous operation during power outages or grid fluctuations, telecom operators deploy robust

backup battery systems.

How does a virtual battery control a base station?

By regulating the charging and discharging behavior of the virtual battery of the base station in such a way that the base station avoids the peak period of power consumption and staggered power preparation, it is able to optimize the regional demand for electricity.
