Belarus outdoor base stations in 2025

Overview

Satellite images from 2025 show warehouses, hangars, fortifications, and foundations laid for residential and office buildings. It is currently unknown which unit will be stationed there, but experts do not rule out the possible deployment of Russian Oreshnik ballistic missiles.

Satellite images from 2025 show warehouses, hangars, fortifications, and foundations laid for residential and office buildings. It is currently unknown which unit will be stationed there, but experts do not rule out the possible deployment of Russian Oreshnik ballistic missiles.

After Russia launched its full-scale invasion of Ukraine, Belarus began actively expanding its military infrastructure. Entirely new military bases and airfields have appeared in Belarus, and existing ones are being modernized. Using satellite imagery, RFE/RL's Belarus Service shows how the.

Satellite imagery and analysis have shown the construction of new military bases in Belarus, including one which could host a nuclear-capable ballistic missile, it has been reported. Belarus is Russia's closest ally, bordering NATO members Poland, Lithuania and Latvia, and has been used as a.

Construction is under way on a site in Belarus experts say looks like a military facility that could potentially house Russian strategic missiles, according to satellite images examined by RFE/RL and its partners in an investigative project. Images from Planet Labs of the sprawling site in the.

In Belarus, a large new military base is under construction, covering over 2 km²—equivalent to 280 football fields, according to the Schemes project citing Planet Labs satellite images. Site preparation began in June 2024 near the village of Pavlovka, south of Minsk, and construction entered an.

Belarus has built two new military bases and carried out a large-scale modernization of its network of military airfields near the borders of Ukraine and Poland. The Schemes journalists documented the development of Belarus' military infrastructure. The journalists analyzed dozens of satellite.

According to Radio Svoboda on September 10, construction began in June 2024 south of Minsk, near the village of Pavlivka. The site now spans more than 2 square kilometers—about the size of 280 football fields. Experts believe the complex may house Russia’s new “Oreshnik” ballistic missile system.
