Bifacial Microinverters

Overview

Are bifacial solar panels better than monofacial panels?

The technology behind solar panels continues to evolve and improve. Manufacturers are now able to produce bifacial panels, which feature energy-producing solar cells on both sides of the panel. With two faces capable of absorbing sunlight, bifacial solar panels can be more efficient than traditional monofacial panels – if used appropriately.

Are bifacial solar panels a good investment?

And, as we'll discuss, bifacial panels are also more expensive than traditional single-face panels, which can affect the breakeven point of your investment. Bifacial solar panels can capture light energy on both sides of the panel, whereas monofacial panels (AKA traditional solar panels) only absorb sunlight on the front.

What are bifacial solar panels?

Bifacial solar panels are different. These types of panels have solar cells on both sides, enabling them to absorb light from the front and the back. By capturing light reflected off the ground through the backside of the panel, each panel is able to produce more electricity.

Do bifacial solar panels increase electricity generation?

Bifacial solar panels are known to increase electricity generation by up to 27%. Why trust EnergySage?

The technology behind solar panels continues to evolve and improve. Manufacturers are now able to produce bifacial panels, which feature energy-producing solar cells on both sides of the panel.

What are the most popular microinverters available in Australia?

Below is our detailed comparison of the most popular microinverters available

in the Australian, European, Asian and US markets. Enphase Energy and APsystems are the most well-known microinverter manufacturers, while ZJBeny, Hoymiles & ZJ Beny recently entered the increasingly competitive market.

Does Enphase IQ 7A microinverter work with bifacial solar modules?

As such, Enphase designed the IQ 7A microinverter with a peak power rating of 366 VA (Volt-Ampere) which, when factored with the optimal inverter loading ratio (DC/AC ratio) of 1.25, will pair with all commercially available 60- and 72-cell solar modules, including bifacial modules.
