

Biggest changes in the solar panel industry

Overview

The survey, now in its third year, gathered insights from solar companies across the industry between December 2, 2024, and January 3, 2025, covering everything from the Inflation Reduction Act to workforce development and the state of the supply chain.

The survey, now in its third year, gathered insights from solar companies across the industry between December 2, 2024, and January 3, 2025, covering everything from the Inflation Reduction Act to workforce development and the state of the supply chain.

Discover the transformative landscape of the solar sector with our latest insights on the "major changes in solar industry 2025." The solar industry is on the brink of transformative changes as we approach 2025. With technological advancements, policy shifts, and market dynamics evolving rapidly.

The US solar industry installed 7.5 gigawatts direct current (GW dc) of capacity in Q2 2025, a 24% decline from Q2 2024 and a 28% decrease since Q1 2025. Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW.

In 2024, between 554 GWdc and 602 GWdc of PV were added globally, bringing the cumulative installed capacity to 2.2 TWdc. China continued to dominate the global market, representing ~60% of 2024 installs, up 52% y/y. The rest of the world was up 11% y/y. The IEA reported Pakistan's rapid rise to.

The solar industry is bracing for a turbulent year, and SolarReviews' newly released 2025 Solar Industry Survey lays out exactly why. The survey, now in its third year, gathered insights from solar companies across the industry between December 2, 2024, and January 3, 2025, covering everything from.

The solar industry is facing a challenging landscape as it heads into 2025, driven by a mix of political uncertainties, potential tariff changes, and the ongoing effects of supply chain disruptions. Insights from the latest Solar Industry Survey reveal that while past challenges related to the.

However, solar power will likely continue to see more interest, especially since it is one of the most well-researched and funded ventures in the clean energy sector. Will 2025 deliver intriguing advancements with commercially viable applications?

These are the trends shaping solar and renewable.
