How do I start a solar module production line?

You can start with a very small line (for example, 25 MW) using refurbished equipment, or you can opt for brand new machines. Brand new machines range from 50 MW (the smallest size) to fully automated lines with 1 GW capacity or more. WE HELP NEWCOMERS to the solar industry start their own solar module production line.

What is a polycrystalline solar panel?

Polycrystalline panels are a lighter blue hue, the cheaper and less efficient option. Generating rooftop solar energy is a simple process in which solar

panels convert sunlight into direct current (DC) power that can be delivered to a home's power system. However, most homes and businesses are wired to use alternating current (AC) power.

Are solar panels monocrystalline or polycrystalline?

Solar panels will generally be categorized as one of two technologies: monocrystalline and polycrystalline. Both types have the same function and are made from silicon cells, but the outward appearance and price differ significantly. Monocrystalline panels are more efficient and expensive and come with a dark blue or black tint.
