Cambodia Energy Storage Temperature Control Price

Overview

What are the main energy sources in Cambodia?

Oil, biomass, and coal are the main energy sources, accounting for 90% of total energy consumption. Around 86% of the coal is consumed for power generation. In its new Power Development Plan, Cambodia plans to invest US\$1.8bn to improve its electricity transmission network.

How much coal is used for power generation in Cambodia?

Around 86% of the coal is consumed for power generation. In its new Power Development Plan, Cambodia plans to invest US\$1.8bn to improve its electricity transmission network. Following the Government's decision to stop building new coal plants, a new 900 MW gas plant is expected.

How will Cambodia's energy policy change in 2030?

Cambodia aims to reduce its GHG emissions by 42% in 2030, compared to a BaU, and to raise the share of renewables in power generation to 70% in 2030. IPPs hold 85% of the power capacity. Foreign companies dominate the upstream and downstream oil sector. Power generation has increased 14-fold since 2010.
