

# **Cameroon's first wind power energy storage project**

## Overview

---

The government's Cameroon energy storage power station bidding initiative for 2023-2026 aims to install 500MW-1GW of storage capacity, creating Africa's first "battery belt" across major river systems [1]. How much money does Cameroon need to build a solar power plant?

The first two modular solar power plants in Maroua and Guider, with battery storage and a combined capacity of 30 MW, were commissioned in September 2023. The Cameroonian government states that Cameroon needs almost 2000 billion euros to finance its energy projects.

Will Cameroon diversify its energy mix?

This project is expected to diversify Cameroon's energy mix, currently dominated by hydroelectricity, which accounts for 61.7% of national production, compared to 1% for biomass and 0% for wind power .

What is the current energy production in Cameroon?

Scientific articles and investigative reports on energy production in Cameroon have enabled an assessment of the current electrical energy production. The 2035 production estimate is based on the Energy Sector Development Projects (PDSEN) report in Cameroon. The current production is estimated at around 1600 MW. Considering the ongoing.

How can Cameroon achieve 5000 MW energy production?

To achieve the targeted energy production of 5000 MW, it is advisable to take steps to avoid certain obstacles, similar to those encountered in Cameroon's initial programs. The potential obstacles impacting this objective are listed in Table 6 below: Table 6. Possible obstacles. Lack of proper road infrastructure for site access.

How much money does Cameroon need for energy projects?

The Cameroonian government states that Cameroon needs almost 2000

billion euros to finance its energy projects. These funds will support the construction of the Limbé gas power plant (350 MW), the Grand Eweng, Chollet, Kikot, Katsina Ala (285 MW), and Menchum (72 MW) hydroelectric dams, among others.

Can Cameroon achieve 5000 MW by 2035?

The 2035 production estimate is based on the Energy Sector Development Projects (PDSEN) report in Cameroon. The current production is estimated at around 1600 MW. Considering the ongoing construction of power plants, future projects, and financing delays, achieving the 5000 MW goal by 2035 appears challenging.
