# **China needs energy storage batteries**

## Overview

---

Sinopec has launched its first battery venture with LG Chem to develop sodium-ion batteries for energy storage and electric vehicles, marking a strategic shift toward clean energy.

Sinopec has launched its first battery venture with LG Chem to develop sodium-ion batteries for energy storage and electric vehicles, marking a strategic shift toward clean energy.

it in rechargeable batteries for use at a later date. When energy is needed, it is released from the BESS to power demand to lessen any he integration of demand- and supply-side management. An augmented focus on energy storage development will substantially lower the curtailment rate of renewable.

The future of warfare is being powered by a quiet revolution in energy technology, and China has positioned itself at the forefront of this paradigm shift with a new tactic: combining cutting-edge solid-state battery research with strategic export controls on critical battery materials and.

China's biggest refiner, Sinopec, has set up a venture with South Korea's LG Chem to develop sodium-ion batteries for the storage industry and for "low-speed" electric vehicles, the company said. This is the first foray of Sinopec in the battery industry. LG Chem said, as quoted by Korean media.
