**China's solar communication
base station inverter is
connected to the grid**

Overview

U.S. energy officials have launched an investigation after discovering unauthorized communication equipment embedded within Chinese-manufactured solar power inverters connected to critical infrastructure grids across the country. Are Chinese solar power inverters connected to critical infrastructure grids?

U.S. energy officials have launched an investigation after discovering unauthorized communication equipment embedded within Chinese-manufactured solar power inverters connected to critical infrastructure grids across the country.

Are Chinese solar power inverters Rogue?

However, rogue communication devices not listed in product documents have been found in some Chinese solar power inverters by U.S experts who strip down equipment hooked up to grids to check for security issues, the two people said.

Are Chinese inverters a threat to solar power?

This vulnerability is especially dangerous given the growing penetration of solar power on Western grids, where in some regions, Chinese-manufactured inverters control upwards of 200 gigawatts of generating capacity – equivalent to more than 200 nuclear power plants.

Why were solar power inverters disabled from China?

In November, solar power inverters in the U.S. and elsewhere were disabled from China, highlighting the risk of foreign influence over local electricity supplies and causing concern among government officials, three people familiar with the matter said.

Could remote inverters destabilize power grids?

Energy security experts warn that coordinated remote manipulation of these

devices could destabilize power grids and trigger widespread blackouts, particularly as Chinese-made inverters now control a substantial portion of renewable energy capacity in the United States and Europe.

Do solar inverters contain undocumented cellular radio devices?

These inverters, which are essential components that convert direct current from solar panels into alternating current usable by the electrical grid, were found to contain undocumented cellular radio devices not disclosed in product specifications or technical documentation.
