

# Colombian power generation container prices

## Overview

---

We provide clients with price projections extending to 2050 under three scenarios that encompass a range of varying macroeconomic conditions. The increasing incorporation of renewable energy sources requires support from firm energy solutions to compensate for their variability.

We provide clients with price projections extending to 2050 under three scenarios that encompass a range of varying macroeconomic conditions. The increasing incorporation of renewable energy sources requires support from firm energy solutions to compensate for their variability.

Gas fired plants is around 4GW 20% and renewable sources mainly Solar PV has reached 9% growing from 0.5GW in year 2023 to 1.9GW in 2024. The country's dependence on hydropower makes it vulnerable to climatic variations and fossil generation fosters the decarbonization dialogue supporting further.

In 2024, the Colombian energy market experienced unprecedented volatility due to the El Niño phenomenon, which reduced reservoir levels and forced reliance on more expensive thermal generation. This led to the average price on the Energy Exchange reaching COP \$759.54/kWh (USD 0.18/kWh) in December.

In normal operating conditions, it corresponds to the highest offer price of the units with centralized sale that have been programmed to generate in the ideal sale and do not present variations. It represents a single price for the interconnected system in each hourly period. When the bag price.

Colombia's government has introduced a new pricing mechanism for electricity sold on the country's energy exchange, aiming to prevent the prices of cheap renewables and coal from soaring, the ministry of mining and energy said on Sunday. Bogota in the evening. Image by: CucombeLibre on Flickr.

Gasoline prices have doubled since COVID with the progressive removal of subsidies. Diesel prices should follow in 2025. The National Energy Plan 2022-2050 foresees 19 GW of non-conventional renewable capacity by 2050.

Around 170 bcm of natural gas was discovered in 2024 in the Caribbean Sea. The.

In 2024 alone, Colombia's energy storage market grew by 28% year-over-year, driven by solar and wind projects in regions like La Guajira [1]. Who's Reading This?

Let's Break It Down Modern energy storage containers in Colombia aren't your grandpa's shipping crates. These modular units pack. How big is the Colombia power market?

Reuse requires attribution under CC BY 4.0. The Colombia Power Market size in terms of production capacity is expected to grow from 22.77 gigawatt in 2025 to 28 gigawatt by 2030, at a CAGR of 4.22% during the forecast period (2025-2030).

How is the Colombia power market segmented?

The Colombia Power Market Report is Segmented by Generation (Conventional Thermal, Hydroelectric, and Non-Hydro Renewable), Transmission and Distribution Voltage Levels (Transmission, Sub-Transmission, and Distribution), and End-User (Residential, Commercial and Industrial, and Utilities).

How much electricity does Colombia produce?

Colombia's installed electric power generation capacity currently stands at 17,771 MW, with hydro accounting for 68 percent, gas and coal-fired power plants accounting for 31 percent, and the remaining one percent from wind and solar units. The country's energy matrix is clean but highly dependent on climatic conditions to generate hydro power.

Will Colombia build a hydrogen value chain?

With abundant natural gas reserves and the largest coal producer in Latin America, Colombia is focusing on blue hydrogen production as a base from which to start building the hydrogen value chain. In 2022, Colombia published its roadmap for offshore wind development, part of a broader plan to wean the country off hydropower and fossil fuels.

Why is the Colombian power market growing so fast?

Residential demand, however, is the Colombia power market's fastest mover, expanding at a 6% CAGR on urbanisation, rising incomes, and greater cooling

uptake. Households registered an 8.22% consumption jump in early 2024, while non-regulated industrial volumes slipped slightly, evidencing diverging patterns.

Who controls the power market in Colombia?

Three incumbents—ISAGEN, EPM, and Ecopetrol—control around 60% of installed capacity, giving the Colombia power market a moderate concentration profile. ISAGEN operates 3,140 MW of mostly renewable capacity, supplying 15.6% of national demand in 2024.
