# Communication Engineering Small Base Station 2MWH

POWER UP INDOORS&OUTDOORS

## Overview

---

How does a small cell base station communicate with a core network?

The small cell base station communicates with the core network over a high-speed backhaul connection. Core network: The core network manages the overall operation of the small cell network, including authentication, authorization, and routing of user traffic.

What is a small-cell base station (SBS) antenna?

To address the growing demand, 5G technology is being implemented at a larger scale. Small-cell Base Station (SBS) antennas are crucial for exploring the full potential of 5G networks by expanding the network in urban areas, densely populated regions, indoor environments, and low-coverage zones.

Are small cell base stations a good idea?

Small cell base stations are more useful than ever with the ubiquity of smartphones, rising data usage, and the advent of 5G. However, small cell base station designs must meet these demands as well as weight and volume restrictions, without sacrificing performance or significantly increasing power consumption.

How can a millimeter-wave base station improve real-time information transmission?

Finally, the proposed metasurfaces help the millimeter-wave base station to realize real-time information transmission of multi-users with different directions in a realistic indoor scenario. The experimental results demonstrate that the new beamforming base station system can intelligently enhance or attenuate signals in specific target areas.

Can a programmable metasurface build a smart base station framework for 6g?

Here, we propose a large-scale 2-bit millimeter-wave programmable

metasurface to build an integrated smart base station framework for 6G communications. The meta-array is composed of  $30 \times 30$  meta-elements, each with two embedded positive-intrinsic-negative (PIN) diodes.

What is a small cell radio unit?

They can receive synchronization from the host network, macro network, or GNSS receiver located outdoors. The small cell radio unit can be broken down into several functions, including Interfaces, Baseband, RF transceiver, RF front end (RFFE), and Antennas.
