# Communication base station EMS module quotation

## Overview

---

What is a communication base station?

Communication base stations are an essential element in providing a stable communication environment for mobile communication devices such as mobile phones and smartphones. The installation of 5G base stations and compact base stations (small cells) in areas where signals are congested is presently proceeding apace.

What is a btr-800 base station?

The BTR-800 base station provides full-duplex communications with the beltpacks. The BTR system incorporates two audio channel operation, permitting the beltpack operator to choose between two separate audio channels of communications, with the base station tracking the beltpack selection.

How do you call EMS?

In many states, there are established training and performance standards for dispatch personnel. The most common method for accessing the EMS system is the telephone. In the late 70's and early 80's, callers became able to call 9-1-1 instead of worrying which number to call.

How does EMS radio communication work?

It may also convert the signal to a telephone signal and send the communications through public or dedicated telephone lines. EMS radio communication takes place in the VHF low band, VHF high band, and UHF band. VHF low band is the radio frequencies from 32-50 megahertz (MHz).

How does EMS rebroadcast a radio signal?

Some rebroadcast by converting signals to radio and others do so by converting to microwaves. It may also convert the signal to a telephone signal and send the communications through public or dedicated telephone lines.

EMS radio communication takes place in the VHF low band, VHF high band, and UHF band.

Why is communication important in EMS?

Communication in EMS is essential. Patients must be able to access the system, the system must be able to dispatch units, EMTs must have a means of communicating with medical direction and receiving facility, and EMTs must be able to communicate vital information to other personnel.
