Overview

Are green cellular base stations sustainable?

This study presents an overview of sustainable and green cellular base stations (BSs), which account for most of the energy consumed in cellular networks. We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

What is the global base station market?

Regional Analysis The base station market exhibits a global presence, with significant growth opportunities across various regions. North America holds a prominent share in the market, driven by the early adoption of 5G technology and the presence of major network operators.

Why is the base station market growing?

Growing Demand for 5G Technology: The deployment of 5G networks is one of the primary factors driving the base station market. 5G technology offers higher data transfer rates, low latency, and increased network capacity, facilitating advanced applications such as autonomous vehicles, smart cities, and the Internet of Things (IoT).

How much energy does a communication base station use a day?

A small-scale communication base station communication antenna with an average power of 2 kW can consume up to 48 kWh per day. 4,5,6 Therefore, the low-carbon upgrade of communication base stations and systems is at the core of the telecommunications industry's energy use issues.

Can low-carbon communication base stations improve local energy use?

Therefore, low-carbon upgrades to communication base stations can effectively improve the economics of local energy use while reducing local environmental pollution and gaining public health benefits. For this research,

we recommend further in-depth exploration in three areas for the future.

Which region is a key market for base stations?

The Asia-Pacific region, particularly China, is a key market for base stations, driven by the rapid expansion of 5G networks and the increasing demand for mobile connectivity. Latin America and the Middle East and Africa region are also witnessing growth due to rising mobile subscriptions and initiatives to improve network coverage.
