Container power distribution cabinet

Overview

What is a power distribution cabinet?

A power distribution cabinet is the general name for the motor control center. It is the final equipment in the power distribution system and is responsible for distributing electrical power to various loads.

What is a power distribution container (PDC)?

Your e-house, or Power Distribution Container (PDC), is engineered in our facility with pre-installed components and wiring completed. Systems are fully parameterized, and system testing is performed before shipment to expedite installation and startup time. Rest easy, knowing your equipment is safe.

What is a power conditioning & distribution cabinet?

Power conditioning and distribution cabinet that offers the benefits of a custom-tailored system while offering the convenience and cost savings of a pre-packaged, factory-tested solution. [Learn More](#).

What is a shipping container electrical room?

At its core, a shipping container electrical room is essentially a mobile substation. It's designed to house all necessary power equipment like switchgear, transformers, and control panels. These units can be easily transported to any location that needs temporary or permanent power solutions from construction sites to remote oil fields.

What is a Liebert RXV remote power distribution cabinet?

The Liebert® RXV remote power distribution cabinet provides dense power distribution in a small footprint, with up to 400 Amp inputs and 84 poles in a single 24"x12" panelboard. [Learn More](#).

Are shipping containers good for electrical equipment?

Shipping containers are inherently robust-constructed from weather-resistant steel and designed to withstand harsh conditions in transit across oceans. This innate durability makes them an ideal choice for housing sensitive electrical equipment.
