

## SolarTech Power Solutions

# Cyprus s solar energy storage policy

## Overview

---

The Ministry of Energy has today published guidelines for its €35 million energy storage scheme, previously approved by the Council of Ministers, aimed at promoting energy storage solutions across the country.

The Ministry of Energy has today published guidelines for its €35 million energy storage scheme, previously approved by the Council of Ministers, aimed at promoting energy storage solutions across the country.

The Ministry of Energy has today published guidelines for its €35 million energy storage scheme, previously approved by the Council of Ministers, aimed at promoting energy storage solutions across the country. The scheme, funded through the 'THALIA 2021-2027' Cohesion Policy Programme and the Just.

Cyprus' Ministry of Energy, Commerce and Industry has launched a subsidy scheme for energy storage systems that can be added alongside existing renewable energy plants. Eligible renewable power plants should be remunerated either by feed-in tariffs (FiTs) or net billing systems. Cyprus has.

The government of Cyprus has published guidelines for a scheme to support the deployment of approximately 150MW/350MWh of energy storage. The Ministry of Energy, Trade and Industry for the Mediterranean island state in southern Europe published its guide (7 February) for the scheme after the.

Cyprus is witnessing an unprecedented transformation in renewable energy infrastructure as BESS and large-scale solar parks combine to create the most ambitious energy independence program in the Mediterranean. With substantial EU subsidy backing and national commitment reaching €35 million in.

The newly launched Nicosia Photovoltaic Energy Storage Policy isn't just another green initiative—it's Cyprus's boldest bet yet to become the region's renewable energy hub. Let's unpack what makes this policy tick and why solar enthusiasts are calling it "the Mediterranean's energy revolution."

Although the government last month started offering purchase incentives for residential batteries, a net metering regime which is in place for solar households means there is little to prompt PV owners to splash out more on storage. Utility the EAC this year installed a 425 kW solar rooftop on its. How many energy storage applications have been approved in Cyprus?

The Cyprus Energy Regulatory Authority (CERA) representatives reported establishing a regulatory framework for energy storage in 2019, followed by market rules approval in 2021. The Cyprus Transmission System Operator has received 13 storage applications totaling 224 megawatts capacity, with eight applications processed and five under review.

Why does Cyprus have a lack of solar energy?

**Lack of Storage:** Unlike other countries with hydroelectric dams or large battery storage facilities, Cyprus has nowhere to store excess solar energy during peak hours. **Grid Congestion:** In some areas, distribution lines can't handle the extra electricity being pushed into them, forcing operators to curtail solar production.

What is happening with solar energy in Cyprus?

**Curtailment Issues & Grid Limitations** – Recent articles highlighting curtailment of excess solar energy due to grid instability. The magnitude of the curtailment problem in Cyprus - In 2024, 29% of green electricity was curtailed. This is equivalent of the total annual consumption of approximately 28,000 households.

Why should you install solar panels in Cyprus?

The technological development within photovoltaic systems goes fast. The solar panels are becoming ever more effective and the cost is decreasing. Installing solar panels in Cyprus is becoming an increasingly profitable option for private households. Save € with solar panels in Cyprus [Read about the Net Metering scheme](#) [Page contents](#).

Why does Cyprus waste so much energy?

AKEL MP Costas Costa characterised Cyprus as “the only country in the world where thousands of megawatt-hours go unused due to lack of centralised green energy storage systems,” adding: “During the day we waste megawatt-hours because we lack storage, and at night we are one step away from blackouts.”.

## How does Cyprus reduce energy consumption?

Reduced Energy Imports and Fines – Cyprus currently spends hundreds of millions of euros importing fossil fuels and then paying up to €570 million in “emission” fines. Every kilowatt-hour stored in a home battery reduces reliance on expensive foreign energy sources, keeping that money circulating within the country.
