Danish flow battery wholesale

Overview

Are batteries subject to producer responsibility in Denmark?

If you produce, import, or sell batteries in Denmark, you may be subject to producer responsibility. On this page we present an outline of what to do to comply with the rules of the Battery Regulation and Statutory Order no. 986 of 20 June 2025. See what you need to do when the new Battery Regulation comes into effect.

What are flow batteries used for?

Flow batteries help create a more stable grid and reduce grid congestion and fill renewable energy production shortfalls for asset owners. Global R&D is fueling the development of flow battery chemistry by significantly enabling higher energy density electrodes and also extending flow battery applications.

Are iron flow batteries better than Li-ion batteries?

Iron flow batteries have a longer asset life than Li-ion batteries. Battery manufacturers are collaborating with utility companies to implement iron flow battery projects, aiming to replace diesel-fueled power generation with the more environmentally friendly flow battery system.

How does the Danish Environmental Protection Agency regulate batteries?

The Agency carries out control and supervision of compliance with the rules of the Battery Regulation and Statutory Order no. 986 of 20 June 2025. This also means that any complaints against decisions made by DPA may be brought before the Danish Environmental Protection Agency.

Are flow batteries the future of energy storage?

Flow batteries, with their ability to create a more stable grid and reduce grid congestion, are considered a promising technology for energy storage. Their adoption is closely linked with the surging energy storage market and can

help fill renewable energy production shortfalls.
