# Differences between outdoor power supply models in the Middle East

## Overview

---

Does the Middle East have a power supply?

Yet as the Middle East is flush with cheap natural resources, the region's power makeup is still almost exclusively dominated by oil and gas.<sup>4</sup> The region currently uses oil and natural gas to meet 97 percent of its electricity needs. Economic growth hinges upon connectivity and power generation.

Will solar power power the Middle East?

The Middle East is a growing region for power generation and will require additional capacity to meet its economic ambitions and the needs of its people. There is no doubt that renewable sources of energy, especially solar, will play a major part in its future power mix.

What is changing in the Middle East's power sector?

This thought-provoking report will broaden the understanding of any audience confronting the changing dynamics of the Middle East's power sector. The power market is transforming as energy independence and economic diversification play a bigger role.

Is the Middle East ready for a new era of electricity?

There is enormous potential for the Middle East's power sector, and plenty of room for a variety of new technologies and companies to help move into electricity's new era.

Which countries are boosting the power sector in the Middle East?

Some countries in the region, including Jordan, Saudi Arabia and the UAE, are strengthening appliance performance standards and introducing targeted financial incentives – to help curb demand growth and also to improve electricity security. Investment in the region's power sector is increasing.

How will the Middle East transform?

There is no question that the Middle East will be at the heart of the transformation taking place. It has one of the world's youngest populations, some of its fastest growing economies, and its electricity demand is rising. An estimated 83 gigawatts of renewable energy capacity alone will be added to the region's energy mix by 2035.
