

Dutch offshore solar project with energy storage

Overview

The project is the world's first offshore solar system within an offshore wind farm and is a collaboration between Dutch floating solar specialists Oceans of Energy and CrossWind, a joint venture company between Shell and Eneco that developed and operates the wind farm.

The project is the world's first offshore solar system within an offshore wind farm and is a collaboration between Dutch floating solar specialists Oceans of Energy and CrossWind, a joint venture company between Shell and Eneco that developed and operates the wind farm.

The granted innovative research project SENSE-HUB, led by TNO, addresses the integration of various energy system modules for the Dutch North Sea. The synergies between offshore wind, offshore solar and hydrogen production at sea will be considered. Solar Enhanced North Sea Energy Hub (SENSE-HUB).

Leiden/The Hague, The Netherlands; 20 th of May 2025 – Offshore installation works have been successfully completed for the anchoring system of the first offshore solar farm in the world to be installed within an offshore wind farm. The anchoring system will hold the solar farm, supplied by Oceans.

The world's first offshore floating solar project, a 0.5 MW array within the Hollandse Kust Noord wind farm off the Dutch coast, is running without public subsidies despite setbacks from storms and fire incidents. Minister of Climate and Green Growth of the Netherlands, Sophie Hermans, has.

What is described as the “world's first” offshore solar farm integrated within a wind farm has completed assembly at the Port of Amsterdam and is ready for deployment at the Hollandse Kust Noord (HKN) offshore wind farm in the North Sea. Dutch company Oceans of Energy assembled the floating solar.

In an unprecedented global milestone that sounds like something straight out of a renewable energy sci-fi novel, a Dutch company has just released a massive floating solar farm into the ocean. According to Oceans of Energy, the “Nymphaea Aurora” solar farm is the planet's very first offshore solar.

An anchoring system has been successfully installed for a new offshore solar project at the Hollandse Kust Noord offshore wind farm, located 22 kilometers off the Dutch North Sea coast. This development is part of a larger initiative to integrate solar and wind energy in a shared offshore location.
