

SolarTech Power Solutions

Ecuadorian forest solar power system

Overview

In this research, an analysis of the electricity market in Ecuador is carried out, a portfolio of projects by source is presented, which are structured in maps with a view to an energy transition according to the office.

When will Ecuador start constructing a solar power plant?

In 2023, the Energy Ministry released tenders for a 500 MW renewable block (wind, biomass, solar), 400 MW Natural Gas Combined Cycle Power Plant (CCCP), and a Northeast Transmission System to supply the Ecuadorian oil system. From these tenders, only the Villonaco project has started construction as of August 2025.

Does Ecuador use solar energy?

Despite this substantial solar potential in Ecuador, PV use remains marginal. The latest report from the Agency of Electricity Regulation and Control (Agencia de Regulación y Control de Electricidad, ARCONEL) indicates that the current PV energy capacity in Ecuador is 27.63 MW .

What is the Current PV energy capacity in Ecuador?

The latest report from the Agency of Electricity Regulation and Control (Agencia de Regulación y Control de Electricidad, ARCONEL) indicates that the current PV energy capacity in Ecuador is 27.63 MW . This number represents approximately 0.32% of the effective power produced by renewable and nonrenewable sources.

What are the energy policies in Ecuador?

Energy policies in Ecuador emphasize the need to diversify energy sources. In Ecuador, energy subsidies are a barrier to achieving a diversified energy mix. The hydroelectric resource compromises the implementation of renewable energies. The adoption of renewable technologies is conditioned to local factors.

What type of energy does Ecuador use?

Ecuador's renewable energy is comprised of hydro power (5,419 MW), biomass (1550 MW), wind (71 MW), photovoltaic (29 MW), and biogas (11 MW). Hydroelectric power plants are in three regions: coastal (2 provinces), Andes (9 provinces), and Amazon (4 provinces).

How important is installed power in Ecuador?

In the Ecuadorian case, the use of installed power is growing, with special attention to large power plants, as exemplified by the Coca Codo Sinclair project, with 1500 MW . Projects currently at risk of erosion that affect feed flows expose the fragility of a poorly diversified system.
