# Energy storage project boom period

## Overview

---

LFP batteries are fuelling a boom in energy storage projects that - in percentage terms - now outpaces electric vehicle sales growth. UBS bank estimates total storage capacity must grow.

LFP batteries are fuelling a boom in energy storage projects that - in percentage terms - now outpaces electric vehicle sales growth. UBS bank estimates total storage capacity must grow.

Global energy storage additions are on track to set another record in 2025 with the two largest markets – China and US – overcoming adverse policy shifts and tariff turmoil. Annual deployments are also set to scale in Germany, the UK, Australia, Canada, Saudi Arabia and Sub-Saharan Africa, driven.

(Reuters) – When Fidra Energy acquired a 55-acre (22-hectare) patch of northern England countryside in 2023, its plan to transform it into a 1.45 gigawatt energy storage facility – Europe’s largest once completed – was far from a done deal. “We were struggling to make the economics work,” Chris.

Overall, battery energy storage systems provide a nameplate capacity of close to 25 GW to the US electricity grid. Most of the capacity is located in California (11 GW) and Texas (6 GW). Assessing the EIA’s planned capacity additions in the coming years, the growth is expected to remain.

– The U.S. Department of Energy (DOE) today released its draft Energy Storage Strategy and Roadmap (SRM), a plan that provides strategic direction and identifies key opportunities to optimize DOE’s investment in future planning of energy storage research, development, demonstration, and deployment.

Why is energy storage so important?

MITEI’s three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids. Replacing fossil fuel-based power generation with power generation from wind and solar.

Demand growth is a rising tide that lifts all boats, and it especially lifted renewable ones in 2024. Renewables were already buoyed by record public and private investment in, and demand for, clean energy that set the stage for continued growth in 2024. 1 Utility-scale solar and wind capacity.
