

**SolarTech Power Solutions**

# **Estonian high rate lithium battery pack**

**ESS**

## Overview

---

In Estonia, there are several developments related to lithium battery pack equipment: Grid-Scale Battery Energy Storage System (BESS): Estonia's first grid-scale BESS, which will utilize lithium batteries, is set to come online in 2025. Stand-Alone Lithium-Ion Energy Storage: There are stand-alone lithium-ion energy storage systems available in Estonia, scalable from 281 kWh to 1,405 kWh. Manufacturing Solutions: Companies like Busch provide vacuum solutions for the lithium-ion battery manufacturing process, which is crucial for producing efficient batteries. Eesti Energia's Project: Eesti Energia is working on a 26.5-MW/51-MWh power storage facility, marking a significant step in Estonia's energy storage capabilities. These projects and equipment highlight Estonia's commitment to advancing its lithium battery technology and energy storage solutions.
