

SolarTech Power Solutions

Finland mobile base station equipment solar round

Overview

Telecoms specialist Elisa is deploying battery and PV systems at base towers in Finland, which will “implement virtual power plant (VPP) optimisation of locally produced solar energy.” Which energy companies are launching new projects in Finland?

Aquila Clean Energy has launched construction on a 50MW BESS in Finland, while MW Storage has launched two new projects in the country. Battery energy storage systems (BESS) from several firms helped the energy system recover after the NSL interconnector, which connects the UK and Norway, suddenly stopped exporting power to the UK.

Are solar powered cellular base stations a viable solution?

Cellular base stations powered by renewable energy sources such as solar power have emerged as one of the promising solutions to these issues. This article presents an overview of the state-of-the-art in the design and deployment of solar powered cellular base stations.

What are the components of a solar powered base station?

solar powered BS typically consists of PV panels, batteries, an integrated power unit, and the load. This section describes these components. Photovoltaic panels are arrays of solar PV cells to convert the solar energy to electricity, thus providing the power to run the base station and to charge the batteries.

Are solar powered base stations a good idea?

Base stations that are powered by energy harvested from solar radiation not only reduce the carbon footprint of cellular networks, they can also be implemented with lower capital cost as compared to those using grid or conventional sources of energy . There is a second factor driving the interest in solar powered base stations.
