France's annual production of 5wg high-efficiency solar modules project

Overview

The factory will start production in 2025 and, at full capacity, will produce 5GW per year, producing 10 million photovoltaic modules annually. That total can power one million European homes. Could a 5 GW PV cell factory help France reindustrialize?

French industrial company Carbon plans the construction of a 5 GW PV cell and module factory in Southern France. Carbon's integrated gigafactory project for photovoltaic cells and modules in Fos-sur-Mer, in the Provence-Alpes-Côte d'Azur region, aims to contribute to France's ambition for reindustrialization.

Does France have a solar energy sector?

The exponential growth of the solar photovoltaic energy sector in France has never stopped since its inception in the early 2000s. In 2023, the PV energy capacity in France amounted to approximately 20.5 gigawatts, making France the fifth European country for cumulative PV capacity that year.

What is solar power generation in France?

This graph provides an annual and monthly overview of solar power generation in France. The evolution of solar photovoltaic generation is an important parameter in the energy transition, as it is a renewable and low-carbon energy. In 2022, solar power generation rose sharply on the back of expanded capacity and good sunlight.

How much solar power does France have in 2023?

In 2023, the PV energy capacity in France amounted to approximately 20.5 gigawatts, making France the fifth European country for cumulative PV capacity that year. Despite this high ranking, solar PV power generation was still behind hydropower and wind renewable energy production.

Why is carbon a reindustrialization project in France?

France, initiated by the President of the Republic. CARBON's integrated gigafactory project for photovoltaic cells and modules in Fos-sur-Mer, in the Provence-Alpes-Côte d'Azur region, contributes to France's ambition for reindustrialization. With a production capacity of 5 GW, CARBON.

Should France and Europe reposition themselves in the photovoltaic value chain?

France and Europe must quickly reposition themselves in the photovoltaic value chain to avoid shifting from one dependence to another. This is a concrete illustration of our desire for reconquest", Agnès Pannier-Runacher, French Minister of Energy Transition said.

France's annual production of 5wg high-efficiency solar modules projected to reach 1.5 GW by 2024
