French communication base station wind power and solar power generation energy saving

Overview

What is solar power generation in France?

This graph provides an annual and monthly overview of solar power generation in France. The evolution of solar photovoltaic generation is an important parameter in the energy transition, as it is a renewable and low-carbon energy. In 2022, solar power generation rose sharply on the back of expanded capacity and good sunlight.

Why is France paving the way for the future of wind energy?

With this dynamism, France is training a new generation of talent, paving the way for the future of the wind energy sector and its companies. The wind industry sector's continued growth, particularly in large-scale projects, creates a favourable environment for international cooperation.

Why is France a good place to invest in wind energy?

French companies' recognised expertise in both onshore and offshore wind is central to France's appeal. The wind energy industry is experiencing steady growth, driven by regular investments and continuous innovation. By the end of 2023, 23.8 GW of wind capacity were installed in France.

Why is the wind energy industry growing in France?

The wind energy industry in France is growing, playing a key role in the country's energy transition. Supported by favourable policies, technological innovation, and investments, the sector presents strong opportunities for international collaboration.

How many people work in wind energy in France?

Wind energy in France is a major source of job creation, but these numbers are not just statistics; they reflect the growing skillset of a highly qualified local workforce. More than 31,000 people currently work in the industry, a number which is expected to exceed 40,000 by 2030.

How much wind power does France have in 2023?

By the end of 2023, 23.8 GW of wind capacity were installed in France. The country has significant potential to develop this energy, particularly through flagship projects such as the Saint-Nazaire wind farm, which has been operational since 2022. Ongoing projects at Saint-Brieuc and Fécamp further demonstrate this ambition.
