How big is the flywheel energy storage system

Overview

The system consists of a 40-foot container with 28 flywheel storage units, electronics enclosure, 750 V DC-circuitry, cooling, and a vacuum system. What is the largest flywheel energy storage system in the world?

Image: Shenzhen Energy Group. A project in China, claimed as the largest flywheel energy storage system in the world, has been connected to the grid. The first flywheel unit of the Dinglun Flywheel Energy Storage Power Station in Changzhi City, Shanxi Province, was connected by project owner Shenzhen Energy Group recently.

Do power utilities need a flywheel storage system?

Power utilities need innovative ways to store renewable wind and solar energy, during low demand periods, so they can release it after sunset when demand is high. Several innovative power utilities already use flywheel storage systems to maintain power grid frequency. Renewable energy is knocking on flywheel energy's door.

What is China's largest flywheel energy storage plant?

China's massive 30-megawatt (MW) flywheel energy storage plant, the Dinglun power station, is now connected to the grid, making it the largest operational flywheel energy storage facility ever built.

Can a flywheel energy storage system stabilize a power grid?

Anything to do with energy storage attracts us, although a flywheel energy storage system is very different from a battery. Flywheels can store grid energy up to several tens of megawatts. If we had enough of them, we could use them to stabilize power grids.

How does a flywheel based energy storage system work?

The flywheel-based energy storage system works by converting electrical energy into kinetic energy, which is stored in a rotating flywheel housed in a

vacuum. When energy is needed, the flywheel slows down, and the kinetic energy is converted back into electrical energy.

Who financed China's largest flywheel energy storage system?

The project was developed and financed by Shenzhen Energy Group. Image: Shenzhen Energy Group. A project in China, claimed as the largest flywheel energy storage system in the world, has been connected to the grid.
