

**SolarTech Power Solutions**

# **How big of an inverter should I use for a 60kW generator**

## Overview

---

Generally, it's recommended to size the inverter to 80-100% of the DC system's rated capacity. Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

What size solar inverter do I Need?

Inverter size is measured in kilowatts (kW). It should match your solar array within a 1.15 to 1.33 ratio. Getting it wrong can reduce efficiency or disqualify you from solar rebates. What size inverter do I need for solar panels?

To calculate, divide your solar panel system's total DC rating by the desired inverter's AC output.

How many kW inverters do I Need?

Therefore, we typically recommend 5 kW inverters which cater even to the peak demand of most British households. Most inverters charge and discharge at the same rate. However, this is not always the case. For example, the Tesla PW3 has a charge capacity of 5 kW and discharge capacity of 11.5 kW.

How does the inverter size calculator work?

Our Inverter Size Calculator simplifies this task by accurately estimating the recommended inverter capacity based on your solar panel power and quantity. By inputting your panel's rated power and number of panels, the calculator produces a recommended inverter power range that aligns with 80-100% of your system's total DC capacity.

What is a recommended inverter power range?

By inputting your panel's rated power and number of panels, the calculator

produces a recommended inverter power range that aligns with 80-100% of your system's total DC capacity. This approach ensures that your inverter is neither under-sized—risking energy losses and performance issues—nor over-sized, which can lead to unnecessary costs.

### How many Watts Does a solar inverter use?

Depending on where they fall in that band and the size of their solar array, they will likely use a 3, 5, or 10kW inverter. You also need to consider surge watts and voltage drop. Surge watts are the extra power required to start appliances that have motors, such as refrigerators and air conditioners.
