How many battery strings are needed for base station power supply

Overview

A typical configuration could have three serial strings, each with twelve 32 12V 40AH batteries, providing the UPS power supply with 384V and a 120Ah capacity. How much battery does a base station use?

How much battery capacity does the base station use?

The average battery capacity required by a base station ranges from 15 to 50 amp-hours (Ah), depending on the base station's operational demands and the technologies it employs. 1.

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO₄) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. Modular Design: A modular structure simplifies installation, maintenance, and scalability.

How do I choose a base station?

Key Factors: Power Consumption: Determine the base station's load (in watts). Backup Duration: Identify the required backup time (hours). Battery Voltage: Select the correct voltage based on system design. Efficiency & Discharge Rate: Consider battery efficiency and discharge characteristics.

Why is backup power important in a 5G base station?

With the rapid expansion of 5G networks and the continuous upgrade of global communication infrastructure, the reliability and stability of telecom base stations have become critical. As the core nodes of communication networks,

the performance of a base station's backup power system directly impacts network continuity and service quality.

What makes a good battery management system?

A well-designed BMS should include: Voltage Monitoring: Real-time monitoring of each cell's voltage to prevent overcharging or over-discharging.

Temperature Management: Built-in temperature sensors to monitor the battery pack's temperature, preventing overheating or operation in extreme cold.
