**How many solar panels are
needed to generate 6kw of
electricity per hour**

Overview

A 6kW energy system has 15 solar panels. Depending on the wattage of the solar panels you choose to go with, the actual number of solar panels for your 6kW system will vary. Most solar panels today have a wattage of about 400 watts.

A 6kW energy system has 15 solar panels. Depending on the wattage of the solar panels you choose to go with, the actual number of solar panels for your 6kW system will vary. Most solar panels today have a wattage of about 400 watts.

A 6kW solar system represents a system capable of producing 6 kilowatts (kW) of electricity under optimal conditions. Kilowatts are a measure of power—specifically, the amount of energy generated or consumed per hour. To put it simply, a 6kW system can generate 6,000 watts of electricity per hour.

A 300-watt solar panel will produce anywhere from 0.90 to 1.35 kWh per day (at 4-6 peak sun hours locations). A 400-watt solar panel will produce anywhere from 1.20 to 1.80 kWh per day (at 4-6 peak sun hours locations). The biggest 700-watt solar panel will produce anywhere from 2.10 to 3.15 kWh.
