In residential settings, there are two primary voltages typically supplied to outdoor outlets: Most residential homes in North America provide 120V circuits for general use. Suitable for common outdoor garden tools like electric lawnmowers, trimmers, holiday lights, and small water pumps. Typically.

In American homes, the standard voltage supply that travels from your local utility substation to your home is 120 Volts. It is commonly referred to as "line voltage" by electricians, the US National Electrical Code (NEC), and other industry experts. Nearly all indoor residential light fixtures and.

Often apprentices get into the trade and see a plethora of different equipment rated at different voltages, and it can be pretty confusing until they start to see commonality in where they're used. For instance, apprentices often ask what is the difference between 208 vs 240 vs 277 volt systems?
