How many watts of solar energy are used on the roof

Overview

Residential solar panels have a power output of around 250-400 watts and can produce up to 2.5 kilowatt-hours of electricity per day.

Residential solar panels have a power output of around 250-400 watts and can produce up to 2.5 kilowatt-hours of electricity per day.

How much solar energy can you generate on your roof?

How many solar panels can you fit on your roof?

How much solar power can you generate by state?

How much solar power can you generate based on your roof size?

In a perfect world, the average roof in the U.S. can generate around 21,840.

The amount of solar energy a rooftop solar system can generate depends on several factors, including panel wattage, roof space, surface area, orientation, and shading. A single panel in a solar system will produce about 2 kWh per day, but there are many variables that impact the generation of solar.
