

How much does lithium energy storage power cost in Peru

Overview

Prices typically range between \$300-\$800/kWh depending on technology and scale, with lithium-ion systems dominating the market. How much lithium does Peru have?

Preliminary studies estimate that Peru's Falchani deposit would have resources of 4.7 million tonnes of lithium. The deposit is considered to contain very high purity of lithium carbonate, mixed with uranium. However, further studies confirming these resources are still pending. the need to define the national policy on lithium in Peru.

How much does a lithium ion battery cost?

The average price of lithium-ion battery packs is \$152/kWh, reflecting a 7% increase since 2021. Energy storage system costs for four-hour duration systems exceed \$300/kWh for the first time since 2017. Rising raw material prices, particularly for lithium and nickel, contribute to increased energy storage costs.

Does Peru need a lithium policy?

the need to define the national policy on lithium in Peru. Besides the uncertainty about possible new lithium regulations, there also exists uncertainty about the current Peruvian political situation, which might jeopardise the future exploitation of the deposit. Peru is not currently a lithium producer.

Why are lithium-ion batteries so expensive in 2025?

In 2025, lithium-ion battery pack prices averaged \$152/kWh, reflecting ongoing challenges, including rising raw material costs and geopolitical tensions, particularly due to Russia's war in Ukraine. These factors have led to high prices for essential metals like lithium and nickel, impacting the production of energy storage technologies.

Is uranium mining legal in Peru?

Peru does not currently have such regulations. In this regard, in 2019 the Ministry of Energy and Mines announced that a regulatory framework for uranium mining was being developed with the support of the United States Agency for International Development (USAID) and the Peruvian Institute of Nuclear Energy (IPEN).

How much does energy storage cost in 2024?

As we look ahead to 2024, energy storage system (ESS) costs are expected to undergo significant changes. Currently, the average cost remains above \$300/kWh for four-hour duration systems, primarily due to rising raw material prices since 2017.
