# How to configure the base station battery pack

## Overview

---

What makes a telecom battery pack compatible with a base station?

**Compatibility and Installation Voltage Compatibility:** 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. **Modular Design:** A modular structure simplifies installation, maintenance, and scalability.

How do I set up a base station?

Set up the base station using either the tripod or T-bar mounting method. You must use an external radio antenna kit for the internal 450 MHz or 900 MHz radio. To avoid interference between the 900 MHz radio and GPRS transmissions, do not mount the external radio antenna within 1 m (3.3 ft) of the GSM antenna.

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO<sub>4</sub>) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

How do you protect a telecom base station?

Backup power systems in telecom base stations often operate for extended periods, making thermal management critical. Key suggestions include:  
**Cooling System:** Install fans or heat sinks inside the battery pack to ensure efficient heat dissipation.

How do you connect a BMS to a battery pack?

**Connecting the BMS:**  
**B- Terminal:** Connect to the main negative (-) terminal of the battery pack.  
**B+ Terminal:** Often already connected internally; check your BMS specifications.  
**B1 (or B0):** Connect to the most negative point (first cell's negative terminal).  
**B2, B3, . . .** Connect sequentially to the positive terminals of each cell in series.

What is a managed base station?

Trimble recommends that base stations that are connecting from a portable, daily-use setup are treated as unmanaged base stations and those used for permanent or semi-permanent setups where the receiver will be in the same place for a longer period of time are treated as managed base stations.
