How to connect the base station circuit to the power supply

Overview

What is a base station power system?

The base station power system serves as a continuous "blood supply pump station," responsible for AC/DC conversion, filtering, voltage stabilization, and backup power. Its purpose is to ensure the uninterrupted operation of base station equipment.

What is a base station connection diagram?

The connection diagram provides a clear overview of how the main base station equipment operates within the network. Surrounding this central "brain" are the "Four Guardians" that ensure seamless functionality: Power Supply: Provides a steady and uninterrupted energy source to keep the equipment operational.

How do I connect a reciter to a 50W base station?

The DC supply to the reciters is via the system control bus ribbon cable. The connections between modules at the front of a single 50W base station are shown below. The PA is powered by a direct connection from the PMU. The reciter is powered from the PMU via the subrack interconnect board and system control bus ribbon cable.

How do I connect a PC to a base station?

Remove the local area Ethernet connection and connect an Ethernet patch cable between the PC and the base station. You can use either straight through or crossover Ethernet patch cable with the current base station firmware. Click Start > Settings > Control Panel. Double-click Network Connections.

How do I configure a single base station?

Single base stations need a control connection to their site controller. A single base station interfaces to the site controller in the same way as the master

base station in a trunked channel group. Select Configure > Network Interfaces > Trunking to configure this. You can program a receiver with the same configuration as a reciter.

What does a base station do?

The base station, positioned between users and data centers, is the first responder to user requests. It relays signals efficiently, ensuring users stay connected. This image highlights the compact but comprehensive nature of base stations, showcasing their integration of protective enclosures, power systems, and antennas. 3.
