# How to connect the wall-mounted power supply of the communication base station

## Overview

---

Which power supply should be used to install IP-DECT base station?

Page 27 INSTALLATION GUIDE IP-DECT Base Station and IP-DECT Gateway  
Installation of the Base Station Only approved power supply according to valid editions of EN/IEC/CSA/UL/AU/NZS 62368-1 is to be used when the base station is powered by a local power supply. TD 92989EN / 25 January 2021 / Ver. E.

What is a base station power supply?

This acts as the “blood supply” of the base station, ensuring uninterrupted power. It includes: AC distribution box: Distributes mains power and offers surge protection. Switch-mode power supply: Converts and stabilizes power while managing DC output. Battery banks: Serve as backup power to keep systems running during outages. 3.

How do I mount a base station?

The base station must be mounted vertically on the wall for best coverage. Use a twisted pair cable, cat. 5e or higher between the base station and the network switch. Mount the base station onto the wall using the screws accompanying the base station. For more information, see "Measurements and Mounting Template" on the next page.

How do connected call stations work?

Connected Call stations will function according to Base Programming. When a call is initiated: Endpoints will either call Base Station first, then call outside numbers or call outside numbers first depending on Base programming. Programming will be performed at each endpoint connected to the SmartRescue.

What is a communication base station?

In the vast telecommunications network, communication base stations play a

frontline role. Positioned closest to end users, they serve as gateways for processing customer requests and managing data flow. In the words of "Interesting Communication Engineering Drawings," these stations act like "business trackers," always vigilant to:.

What is a wall mounted power box?

Role: This wall-mounted box is the first checkpoint for incoming mains power. It handles secondary AC distribution and offers protection against lightning and power surges. Placement: Usually positioned at the side of the equipment room.
