Huawei Pretoria Energy Storage Firefighting System

Overview

Does Huawei's fire-free energy storage system redefine safety?

Abstract: With the battery pack-level thermal runaway control, Huawei's fire-free energy storage system (ESS) redefines safety. [Shenzhen, China, December 24, 2024] Huawei Digital Power and TÜV Rheinland jointly completed ESS safety tests on Huawei's Smart String & Grid Forming ESS Platform (LUNA2000-4472 series and LUNA2000-215 series).

Does Huawei have a fireproof energy storage system?

Huawei applied for a patent regarding a fireproof energy storage system to prevent accidents. The application is now authorized and the tech giant could soon begin work on it. Energy Storage System and Control Method Thereof – Patent.

Does Huawei Digital Power's Smart string & grid forming energy storage system pass an ignition test?

Huawei Digital Power's Smart String & Grid Forming Energy Storage System (ESS) has successfully passed an extreme ignition test in the presence of customers and Norway-headquartered independent assurance and risk management provider DNV.

Does Huawei smart string & grid forming ESS (container a) combustible gases?

However, in Huawei's Smart String & Grid Forming ESS (container A), thermal runaway was initiated in 12 cells without an incident. The system's combined defense mechanism—positive pressure oxygen barrier and directional smoke exhaust duct—effectively vented combustible gases, the manufacturer reported.

How many Bess units did Huawei use in a fire test?

In its ignition test, Huawei used four utility-scale BESS units. This was

previously done by Sungrow, which in November 2024 conducted a fire test on 20 MWh of BESS. The exercise involved four liquid-cooled 5 MWh Powertitan 2.0 storage systems and came with a price tag of \$4.2 million.

What are the components of a fireproof energy storage system?

The components for the fireproof energy storage system require a box, an energy storage device, and a safety control system. This safety box plays a main role in the energy storage system. It uses a compact sensor that detects combustible gases. It is further responsible to set off these gases from the storage system.
