

# **Huawei's five major energy storage projects in Estonia**

## Overview

---

Why is energy storage important for Estonia?

Energy storage is also vital for meeting Estonia's goal of sourcing all its electricity from renewable sources by 2030. The country's climate minister, Yoko Alender, emphasised the role of storage systems in this transition, saying they would help ensure a "clean, reliable and affordable energy future" for Estonia.

How has the transition to a 15-minute balancing period impacted Estonia's energy storage?

State-owned energy company Eesti Energi management board member Kristjan Kuhki recently highlighted to Energy-Storage.news Premium that the transition to a 15-minute balancing period and the desynchronisation of the Baltic electricity system from the Russian grid have spurred growth in Estonia's energy storage sector.

Why did Lithuania announce 800 MWh energy storage tender?

In similar moves, only a day before it began to unplug from Russia's electricity grid and join the EU's network, Lithuania announced 800 MWh energy storage tender to the tune of EUR 102 million (\$ 105 million) with the goal to procure balancing services to the transmission system operator and ensure the resilience of its grid.
