Hybrid energy construction of mobile cellular communication base stations

Overview

Can small base stations conserve grid energy in hybrid-energy heterogeneous cellular networks?

Abstract: Dense deployment of small base stations (SBSs) within the coverage of macro base station (MBS) has been spotlighted as a promising solution to conserve grid energy in hybrid-energy heterogeneous cellular networks (HCNs), which caters to the rapidly increasing demand of mobile user (MUs).

Do cellular network operators prioritize energy-efficient solutions for base stations?

Recognizing this, Mobile Network Operators are actively prioritizing EE for both network maintenance and environmental stewardship in future cellular networks. The paper aims to provide an outline of energy-efficient solutions for base stations of wireless cellular networks.

What is hybrid solar PV / wt / BG?

Given the geographical position, the hybrid solar PV / WT / BG system along with appropriate energy storage devices is an effective solution for developing green cellular connectivity. It offers a potential solution for bridging the gap between high data rates and long idle times in the 5G mobile network .

What is a hybrid solar PV / BG energy-trading system?

A hybrid solar PV / BG energy-trading system between grid supply and BSs is introduced to resolve the utility grid's power shortage, increase energy self-reliance, and reduce costs.

Does a hybrid network consume more energy than a full-digital network?

The energy consumption of the network gets increases as the density of small cells rises. Certain findings as indicated above suggests that hybrid architectures in massive MIMO systems have much higher achievable EE, although their SE is lower than full-digital architectures.

Does a hybrid approach improve EE and SE performance in small cells?

For small cells in UDN, a hybrid approach optimizing both EE and SE is required with the constraints of high data rate and interference thresholds. It was observed that, with a slight decline in SE performance, the EE may be greatly enhanced.
