Hybrid energy for telecommunication base stations in Greece

Overview

Which power system delivers the most energy for 4G/LTE telecom towers?

However, with the impact of carbon emission on the long term towards the environment, hybrid power system delivers the most energy for 4G/LTE telecom tower. Average annual OPEX savings would be better with hybrid power with the hybrid battery as the main energy storage [10-16].

Are base transceiver stations environmentally friendly?

The only electrical source currently in service in the Base Transceiver Stations (BTS) is a diesel generator. As a result, diesel generators are not economical and are not environmentally friendly. Therefore, these sites must integrate sustainable energy sources like wind and solar [4].

What is a base transceiver station?

The base transceiver station is one of the main components of cell sites that consume energy. Diesel fuel purchases for generators, which make up over 80 % of plant-level energy expenditures at off-grid and off-grid tower sites, are the primary source of these costs.

What is a hybrid energy storage system?

Hybrid energy storage systems using battery energy storage has evolved tremendously for the past two decades especially in the area of car manufacturing either in a fully hybrid electric car or hybrid car that use battery energy storage with internal petrol combustion engine .

Why do we need a hybrid energy system?

Promoting equality and employment creation can also improve the region's social and environmental characteristics. A hybrid energy system will assure energy security and reliability, especially when it has a variety of various heterogeneous energy supplies.

What is unique about this research based on hybrid energy storage?

The interesting or unique about this research compared to other research-based on hybrid energy storage is to apply hybrid energy storage in the poor grid and bad grid scenarios which are not discussed in another research before.
