Iceland energy storage power station installation

Overview

What is the capacity of the largest power station in Iceland?

The largest power station in Iceland has a capacity of 240 megawatts (mw). Other major hydroelectric stations are at Hrauneyjarfoss (210 mw) and Sigala (10 mw). Efforts are underway by the government to export hydroelectric energy to Europe by transporting it via submarine cables.

How many power stations are there in Iceland?

We operate fourteen hydropower stations, three geothermal power stations and two wind turbines for research purposes in five operating areas in Iceland. In operating power stations, emphasis is placed on a holistic vision, where prudence, reliability and harmony of the operations with environment and society are the guiding principles.

Who runs the hydroelectric power station in Iceland?

Historically, all the hydroelectric power stations in Iceland are run by Landsvirkjun, the National Power Company of Iceland. Currently, the largest power station is Kárahnjúkar Hydropower Plant, which generates electricity in the north Vatnajökull area for aluminum production.

What makes Landsvirkjun a good power station?

In operating power stations, emphasis is placed on a holistic vision, where prudence, reliability and harmony of the operations with environment and society are the guiding principles. Landsvirkjun is the National Power Company of Iceland. We produce electricity from renewable energy sources; hydropower, geothermal energy, and wind.
