Industrial Park Energy Storage Project Investment

Overview

Is Intersect Power developing an energy park in Texas?

It is also developing an energy park in the Texas Panhandle. In 2013, Intersect Power proposed its Meitner project, which would use 460 MW of on-site wind and 340 MW of on-site solar to power 400 MW of hydrogen electrolyzers, Energy Innovation Policy & Technology said in a report on energy parks released Monday.

Can energy parks provide grid services?

Energy parks can provide grid services, but they face regulatory challenges, including uncertainty around the rules for co-located load, according to Energy Innovation. Google will buy power for planned data centers to be co-located with renewable energy and energy storage to be built by Intersect Power, the companies said on Dec. 10, 2024.

Can energy parks be a microgrid?

In 2013, Intersect Power proposed its Meitner project, which would use 460 MW of on-site wind and 340 MW of on-site solar to power 400 MW of hydrogen electrolyzers, Energy Innovation Policy & Technology said in a report on energy parks released Monday. Energy parks are effectively large microgrids, Energy Innovation said.

Should energy parks be regulated?

Energy parks — such as those envisioned under the Google initiative with Intersect Power — can serve large loads like data centers and also provide grid services, but they face regulatory challenges, including uncertainty surrounding the tariffs for co-located load, according to the report.
