Install mobile energy storage site inverter and connect to the grid

Overview

Can a grid-tie inverter feed-in PV power?

Feed-in of PV connected to grid-tie inverters occurs automatically. There are no settings or special design considerations to be considered whether connected on the input and/or output of the inverter/charger. No feed-in Feed-in of PV power via an MPPT Solar Charger can be enabled or disabled in the Energy Storage Systems menu on the CCGX.

How to install a solar inverter?

Solar inverter installation varies depending on the type of configuration. Thus, to connect the grid inverter to the mains, you must choose if it will connect directly to the battery or not. For instance, the on-grid system inverter is connected directly to the mains, while the off-grid inverter output is first connected to a storage battery.

How does a grid-tie inverter work?

The grid-tie inverter is configured to a solar meter which later connects to the mains. The meter is used to calculate excess energy from the inverter grid, later stored in a utility grid for future consumption.

How does an on-grid inverter work?

For an on-grid system, you will not be using batteries. Thus, unlike the off-grid systems, you will connect the inverter directly to the grid. Plug it into the main power switchboard to join the grid, which acts as the input wire. The other wire, which acts as the output wire, connects to the switchboard, which supplies the current.

How do you connect a grid inverter?

Most people prefer the series connection from on-grid panels because it significantly increases the voltage received by the grid inverter. To do that, you should connect the first panel's positive terminal to the second panel's

negative terminal, which connects to the third panel's positive terminal and continues the process.

How do I enable/disable feed-in of PV power via an MPPT solar charger?

Feed-in Feed-in of PV power via an MPPT Solar Charger can be enabled or disabled in the Energy Storage Systems menu on the CCGX. Note that when disabled, the PV power will still be available to power AC loads. Feed-in of PV connected to grid-tie inverters occurs automatically.
