

**SolarTech Power Solutions**

# **Inverter in solar cell**

## Overview

---

Solar inverters use maximum power point tracking (MPPT) to get the maximum possible power from the PV array. There is a complex relationship between voltage, temperature and total resistance that produces a non-linear output efficiency known as the I-V curve. It is the purpose of the MPPT system to sample the output of the cells and determine a resistance (load) to obtain maximum power for any given environmental conditions.
