# Inverter life price

## Overview

---

How much does a solar inverter cost?

You won't be able to use the electricity generated by your solar panels without a solar inverter. A solar inverter costs \$2,000 on average, with prices ranging from \$800 to \$5,000 —though the overall price is wrapped up in your solar panel installation. The size of your system, the type of inverter, and the efficiency rating affect your final cost.

How long do solar inverters last?

Solar inverters last 10-15 years on average, with microinverters and power optimizers often lasting 20+ years. Heat, quality, installation, and maintenance heavily influence lifespan. Regular check-ups, proper placement, and using quality parts extend durability. Budget for at least one inverter replacement during your solar panel system's life.

How much does a string inverter cost?

String inverters cost \$800 to \$2,500 on average. Most homes only require a single inverter, but you could need up to three if you have a larger-than-average residential solar energy system. String inverters work by connecting several solar panels, which send their electricity to a central point where the inverter converts the power.

How much does a microinverter cost?

Microinverters cost an average of \$150 to \$300 each, but you'll need one for each solar panel in your system. They're installed on the underside of each panel and immediately convert electricity as soon as it's generated, helping increase efficiency by limiting energy loss. Microinverters are popular because they perform well in areas with shade.

When should you replace a solar inverter?

If you have a solar inverter, you may be wondering when you should replace

it. There are a few things to keep in mind when making this decision. First, the average lifespan of a solar inverter is about 10 years. This can vary depending on the quality of the inverter and how well it is maintained.

**How long do microinverters last?**

Microinverters have a longer life. EnergySage said they can often last 25 years – nearly as long as their panel counterparts. Usually, these inverters have a 20 to 25-year standard warranty included.
